

OpenIndia Software: Steps for sample commit

Note: Steps from 2 to 7 are only one time activity for any repository.

1. Create an account at [www.GitHub.com](https://github.com) website.
2. Send me your login userid by FB or google chat, so that I can add you to the team.
3. After confirmation, sign in and enter “Nalanda” in the search box at top

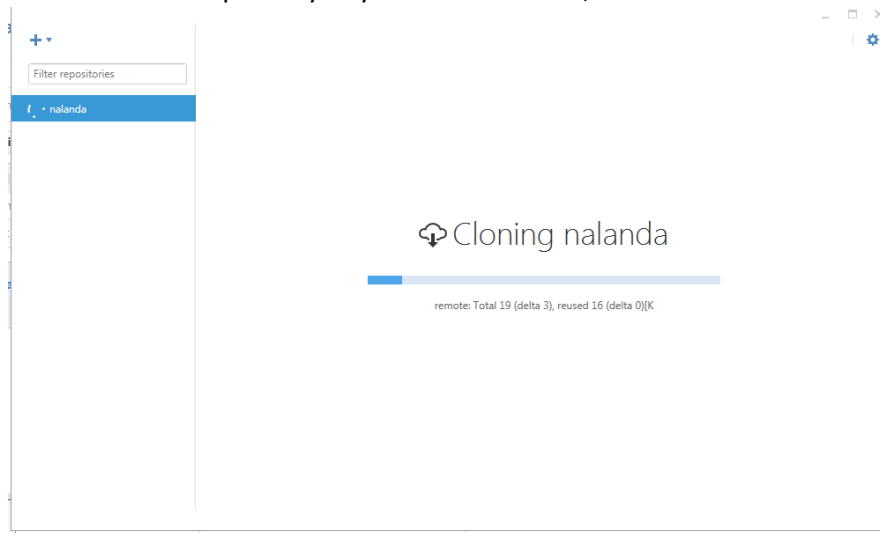

4. Select OpenIndiaSoftware/nalanda repository. This is our test repository. It has a text file named “My_Name_Is.txt”.
5. Now in another tab in browser, open windows.github.com
6. Download the software and install it.
Note: If you are using Mac, go to mac.github.com.
7. Open the installed GitHub software and In repository window, click on “Clone in Desktop” in bottom right of the screen,

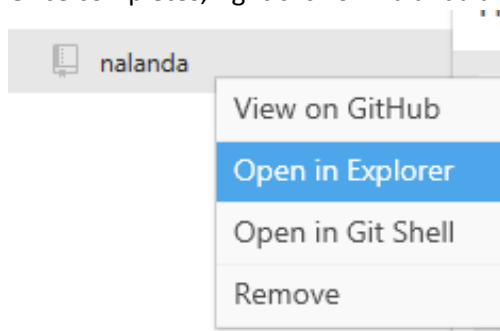

8. It will ask for the folder location where the files will be stored. Create a new folder and Select it.

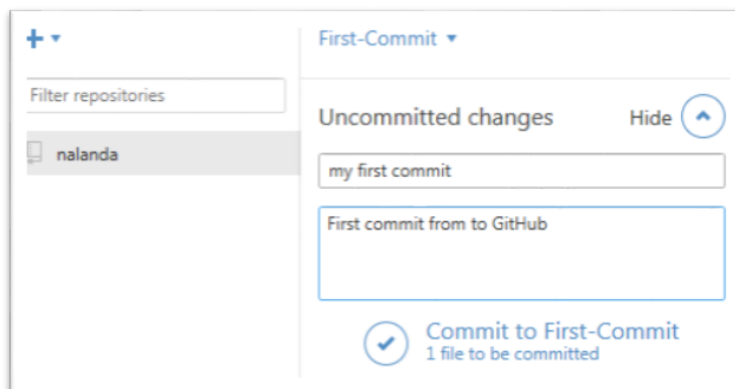

9. It will clone the repository to your local machine,

10. Once completes, right click on Nalanda and select “Open in Explorer”

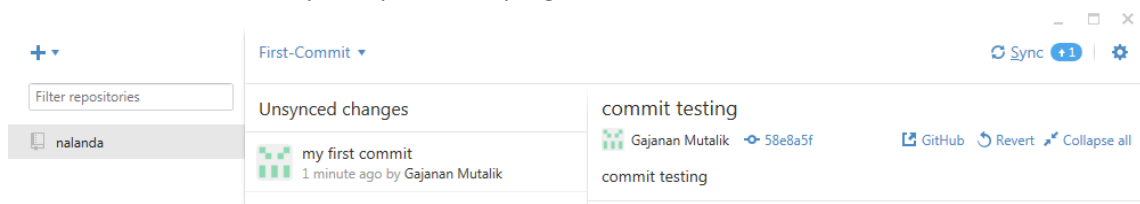

11. Open “My_Name_Is.txt” file in notepad, add your name on the new line and save the file.
12. In the software, it will show “Uncommitted Changes”, enter Summary and description for changes.
13. Now select “Commit to First-Commit” option,

14. You will see message, “Created commit.....” in bottom. This means that the changes are now committed to your cloned repository on your local machine.

15. Now click “Publish” or “Sync” option in top right corner,

16. If it is successful, it will not display any error message and will stop processing. You are done!

17. Now go to browser and open this file to confirm that changes have been reflected there.

END
